

About Fairfax Radiological Consultants

Fairfax Radiological Consultants, P.C. (FRC) is the largest private radiology practice in the D.C. metropolitan area. Since 1963, FRC has been providing world-class radiological services to patients, doctors and hospitals throughout Northern Virginia. From CT scans to mammograms to ultrasounds to nuclear medicine, FRC and its more than 70 radiologists and 13 outpatient imaging facilities can meet any radiological need.

FRC radiologists cover the spectrum of imaging services including; diagnostic radiology, breast imaging, nuclear medicine, neuro-interventional, pediatric radiology, PET/CT, cardiac CT, MRI/MRA, ultrasound, vascular and interventional radiology, pain management, and numerous other specialized exams.

FRC is the only imaging practice in Northern Virginia with an accredited Breast Imaging Center of Excellence. For more information about Fairfax Radiology, visit www.fairfaxradiology.com

Your HDCT Scan
a clearer picture for your doctor
less radiation for you

Clearly Better

The CT scan (short for computed tomography) is one of the greatest advancements in modern medicine, enabling radiologist physicians to see inside the human body to diagnose disease without invasive tests or surgery.

At Fairfax Radiology, we are using the latest advancement in CT technology to deliver high definition images of unsurpassed clarity and quality – while **reducing the amount of radiation exposure to patients by an average of 50 percent** so that your doctor can see more and know more, with less radiation.

CT imaging is a proven and versatile problem-solver for physicians that can often accelerate treatment planning. It is one of the best and fastest tools for studying the body because it provides detailed, cross-sectional views of all types of tissue. Doctors prescribe CT scans for patients who are ill or injured, or when the doctor suspects a medical problem that cannot be detected with a routine physical examination.

Less is More at FRC

FRC is the first radiology practice in Northern Virginia to offer state-of-the-art, high definition CT scanners that provide up to 33 percent clearer images and an average of 50 percent lower radiation doses for patients.* This superior technology is in all five of FRC's CT scanning facilities.

Whether you have been referred by your physician for your first CT study, or are returning for a follow-up exam, you can be assured that your CT exam at FRC will provide your physician with the most detailed images possible, and that you will be receiving the minimal amount of radiation exposure necessary for your particular study.

*Results may vary due to patient size and scanning protocol.

Fairfax Radiology performs high-definition, low-dose CT scans at our five CT imaging centers, conveniently located throughout Northern Virginia:

- Centreville-Clifton Imaging Center
- Prosperity Imaging Center
- Reston/Herndon Imaging Center
- Woodburn Diagnostic Center
- Yorktown Imaging Center
